SM0405 The S&P 500, an index that tracks the performance of the stock market, entered a "Bear Market" for a short time on April 7th which is when an index declines by 20% or more in a two-month period. This decline began immediately after President Trump's implementation of reciprocal/tit-for-tat tariffs on imports from every country in the world on April 2nd, 2025. Many have argued that if tariffs were lifted by the United States, further economic decline could be prevented, and the market may recover quickly.
